

THE PREFERRED SOURCE

SLICED WEAR LAYERS FOR
ENGINEERED HARDWOOD FLOORING

Hardwood Excellence.

DANZER

WHY DO HARDWOOD FLOORING PRODUCERS PREFER SLICED WEAR LAYERS FROM DANZER?

FOCUS ON WHAT CUSTOMERS ARE ACTUALLY PAYING FOR

- With Danzer's 2.5 to 4 mm thick sliced wear layers for engineered hardwood flooring, producers can capitalize on a growing market segment that won't pay for added thickness derived from 5 to 6 mm wear layers.
- No costly and time-consuming changes to manufacturers' production set-up are required.

A TRULY NORTH AMERICAN PRODUCT

Danzer has been processing hardwood in North America for more than 50 years. Its sliced wear layers are being produced locally.

DON'T MISS AN ORDER

More than 50 domestic and imported species are used for hardwood flooring in North America, and Danzer sources many of them. Our connections enable producers like you to serve all markets by offering a broad portfolio – without adding cost or complexity to the supply chain.

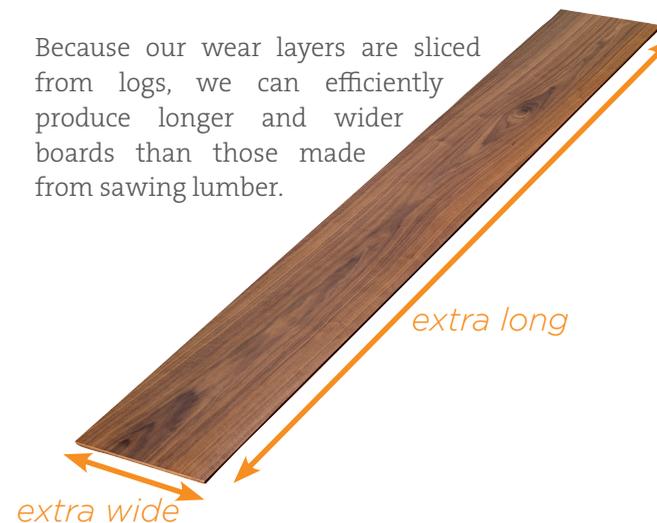

A RELIABLE PARTNER

Worldwide Danzer delivers an average of more than 1 million m² flooring wear layers per year. Our proprietary best-in-class VS4000 veneer slicers deliver the consistent, high-quality lamellas in desired thicknesses that hardwood flooring producers rely on.

SECURE LARGE DIMENSIONS FOR SINGLE PLANK FLOORING

Because our wear layers are sliced from logs, we can efficiently produce longer and wider boards than those made from sawing lumber.

HIGHEST STANDARDS OF SUSTAINABILITY

Using sliced instead of sawn wear layers saves thousands of truckloads of valuable hardwood trees, because no sawdust is produced. Plus, virtually all wood processed at Danzer facilities is certified. Producers – as well as future generations – depend on us for that.

QUESTIONS? WE CAN HELP.
