

The image features three vertical wooden planks with a rich, dark brown grain. The leftmost plank has a white line forming a series of overlapping circles. The middle plank has a white line forming a series of overlapping hexagons. The rightmost plank has a white line forming a series of overlapping pentagons. The patterns are clean and modern, contrasting with the natural wood texture.

FREEFORM

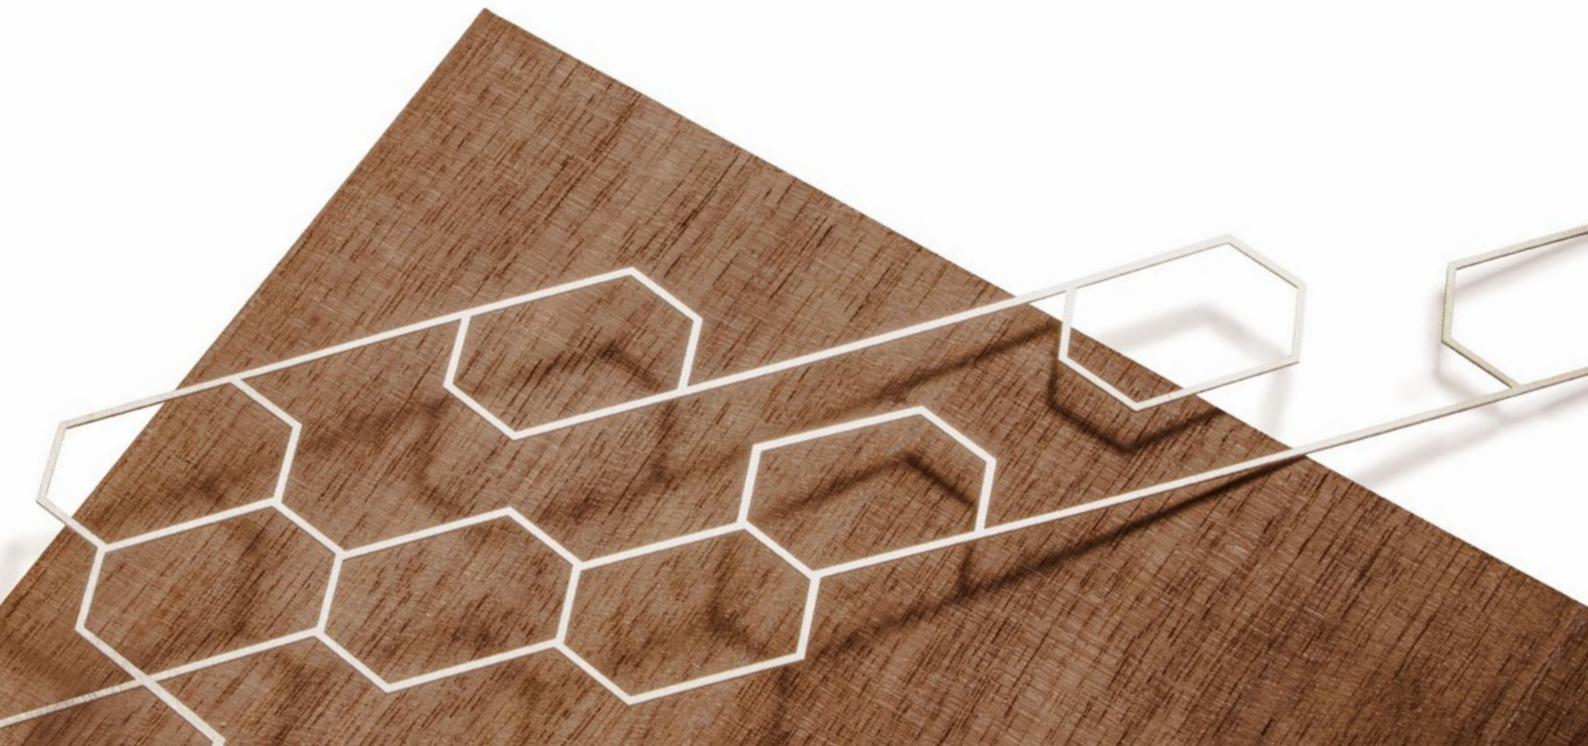

SURPRISING
DISTINCT
INDUSTRIAL
UNLIMITED

Metal inlays add distinction to wooden surfaces. Creating them so far involved either costly manual labor or limited the inlay shapes to simple linear designs. Danzer has developed an industrial process.

DANZER FREEFORM

allows to produce veneer with almost any organically shaped inlay. Ornaments, signage or logos can be added to wooden surfaces quickly and at reasonable cost. They will enhance the visual appearance, add functionality or carry a brand message.

PRODUCT INFORMATION

Delivered units: fleece-backed veneer sheets with inlay ready to use

Thickness: approximately 0.6 mm

Wood species: most species possible – upon customer request

Inlay design: according to customer specification

Inlay material: aluminum – other materials possible on request
