BEAUTIFUL

It's been more than 70 years since Charles and Ray Eames experimented with molded wood. As the designers pushed the material as far as it could go at that time, they surrendered to the design process that ultimately led to their *Molded Plastic Chair*.

EAMES® MOLDED WOOD SIDE CHAIR

Creating the classic shell chair out of wood was finally made possible by Danzer's revolutionary 3D-Veneer technology. The result is an elegantly shaped, comfortable but strong and durable shell. This is an authentic Eames product by Herman Miller; produced in the USA with material made in Germany.

Eames® Molded Wood Side Chair
